

File name:

“Experiment time + Strain name + SUS/RES + Antibiotic name + Imaging Time slot”

Experiment time: Month. Date

Strain name:

- DH5a
- ECN
- 0xx: Clinical strains

SUS/RES:

- the bacteria is susceptible/ resistant with that antibiotic
- In some files, no antibiotics are added. Such files would be marked as “NA” for antibiotics. They can be considered as wild type, suggest to use in segmentation.

Antibiotic name:

Kan: Kanamycin

Ceft: Ceftriaxone

Cipro: Ciprofloxacin

Genta: Gentamicin

Pip/Tazo: Piperacillin–Tazobactam

PS: In some files, the condition is marked as resistant, while you might not see growing/ significant fluorescence signals inside. That is because the bacteria would pump out the dye sometimes. Suggest to use such files only in segmentation or do not use them at all.
